Saint Louis University has started upgrading its existing buildings to higher energy efficiency. At present, SLU has solar PV rooftop systems at the main campus, Maryheights campus, and the SLU Medical Center.

WEnergy Global is in Bakakeng Central, Baguio City.

March 11 · 🌐

WEnergy Global, the long-term technological partner of [Saint Louis University](#), commissioned the solar PV rooftop system of Saint Louis University Maryheights Campus in Bakakeng, Baguio City this week on 10 March 2022. The 90.9 kWp system is expected to produce more than 122,000 kWh of solar energy on its first year, or equivalent to 87 metric tons of CO₂ avoided, 45.7 hectares of forests carbon sequestered or 11 million smart phones charged.

This is the second solar PV system owned by SLU, with another one coming up in the next month. SLU is a model university promoting energy efficient buildings and green campuses in Baguio City.
