The Youth Council of Ecolodians, another student organization in the University, visited the Coastal Underwater Resource Management Actions (CURMA) headquarters in San Juan, La Union on February 26, 2025. Their main goal is to explore collaboration opportunities with CURMA. There were three conservation initiatives raised, including increased community participation in educational programs, conservation efforts, and awareness about endangered sea turtles and marine preservation, as assessed through post-activity surveys and participation metrics. CURMA and YCE planned their project collaborations which includes tree planting, clean up drives, community talks, and livelihood programs.
