AND SANITATION

Saint Louis University

Supports Off-campus water conservation

Saint Louis University (SLU) strengthened its commitment to off-campus water conservation and access through community partnerships, educational outreach, and sustainable infrastructure projects.

Under the “Water is Life” Initiative, SLU, in partnership with KBWorld Trading Corporation, established free water refilling stations that extend safe and clean drinking water access not only to students and staff but also to nearby residents and visitors. These stations, launched in multiple locations since 2023, actively promote refillable container use and reduce single-use plastic waste—supporting community-level water sustainability.

In collaboration with the City Government of Baguio, SLU hosted the Bingo Scorecard Eskwela Caravan and Stakeholder Consultation (November 2024), which empowered local communities and schools to monitor environmental and water-related indicators. This initiative promoted civic engagement, awareness, and shared responsibility in maintaining water quality and conservation practices.

6 CLEAN WATER AND SANITATION

Further extending its advocacy, SLU participated in the Coastal Underwater Resource Management Actions (CURMA) Orientation and continued operations of the SLU–Sacred Heart Medical Center Sewage Treatment Plant, ensuring safe wastewater management that benefits downstream communities.

Through these combined actions, SLU demonstrates holistic and sustainable engagement in community water stewardship—integrating access, education, and environmental responsibility beyond its campus boundaries.
