Saint Louis University

Water Consumption for 2024

Source	Volume (m ³)	% of Total	Notes
Main Supply	53,789	42%	Sourced from Baguio Water District
Ground-water	75,604	58%	From in-campus groundwater sources
Total	129,393	100%	

Total campus population	25,953	includes all students, staff and employees
Water Use Efficiency	5 m ³ /FTE	average use per person per year

Performance Insight

The university’s average annual water consumption is 5 m³ per capita, which translates to **13.9 liters per day**. This per-capita value is **significantly lower** than the standard set in the Sanitation Code of the Philippines, which identifies an **average requirement of 40 liters per capita per day for schools**.

This comparison indicates that the university’s water consumption is well below the expected national benchmark for educational institutions, reflecting highly efficient water use and the impact of conservation measures in place.
