Saint Louis University: Advancing SDG 3 through Health Professions Education

PROPORTION OF GRADUATES IN HEALTH PROFESSIONS: AY 2025-26

In support of Sustainable Development Goal 3 (Good Health and Well-being), Saint Louis University continues to make a significant contribution to the development of the health workforce through its diverse health professions and health-related academic programs.

In Academic Year 2025–2026, Saint Louis University produced a total of **4,602** graduates across its undergraduate, professional, and graduate programs. Of this total, **1,759** graduates came from programs classified as health professions or health-related disciplines, representing **38.2%** of the university's total graduates for the academic year.

4,602

Total Graduates for AY 2025-2026

1,759

Graduates in different Health Professions for AY 2025-2026

38.2%

of the total graduates

The health professions graduates included students from undergraduate, professional, and graduate programs that contribute directly to the health workforce and to the broader fields of medicine, allied health, public health, and health-related sciences. These included graduates from programs such as Nursing, Medical Laboratory Science, Pharmacy, Radiologic Technology, Biology, Psychology, and the Doctor of Medicine program, as well as relevant graduate programs in health and allied health disciplines.

Following the Times Higher Education (THE) Impact Rankings methodology, the institution considers graduates in health professions to include those who receive a degree associated with a health-related profession, including direct patient-care practitioners, allied health professionals, public health and community health practitioners, and disciplines that provide essential academic and professional foundations for medicine and health care.

Thus, for Academic Year 2025–2026, **1,759** out of **4,602** graduates, or approximately **38.2%**, were graduates in health professions and health-related fields. This demonstrates Saint Louis University's substantial contribution to developing the human resources required to support health care delivery, public health, and community health, particularly in Northern Luzon and the Cordillera region.
