HEADER 2

In Pursuant to Republic Act No. 9003, the Ecological Solid Waste Management Acts of 2000, and the City of Baguio Ordinance No. 18, Series of 2016, otherwise known as the Environment Code of the City of Baguio, In support of this, Saint Louis University implemented proper waste segregation, collection, recycling, and disposal practices. The University maintain records of waste generated and, where applicable, monitors the quantities of waste sent to landfill, recycled, reused, composted, or otherwise recovered. The University implement measures to reduce the volume of waste disposed of in landfills and promote responsible waste management across its facilities.

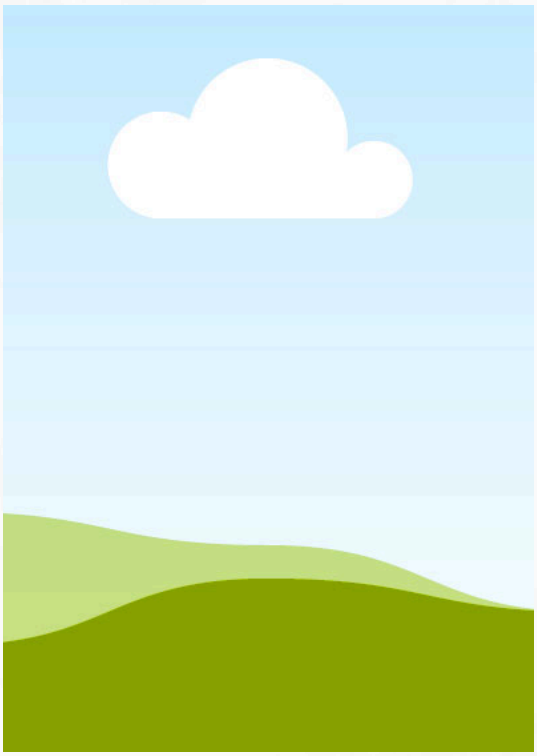

1. Segregation of solid waste at sourceSegregation of solid waste at source is mandatory. Wastes are classified and segregated into biodegradable, recyclable, residual and special wastes. They should be segregated by the waste generators themselves at the place where they are generated.

2. Separation of solid waste containers
The generated solid wastes must be properly separated and placed in four (4) separate containers. Containers must be appropriate to facilitate efficient handling, storage, collection, transport or disposal.

3. Collection and disposal of solid waste
Only solid wastes that are segregated at source shall be collected by the janitorial personnel assigned in the area.

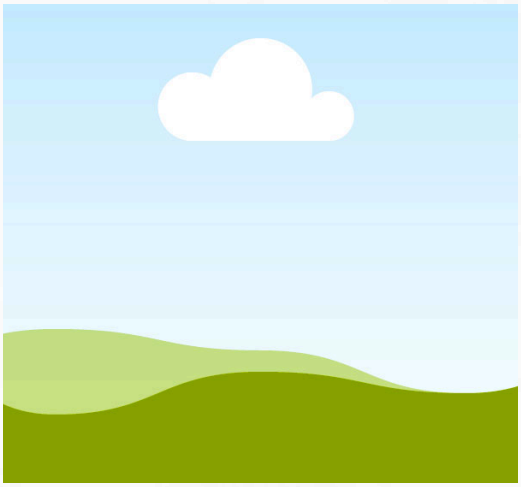

To ensure that the purpose of segregation will be fulfilled, segregated wastes should not be mixed in one container during collection by the janitorial personnel.

Segregated wastes should be stored in the designated appropriate facility for collection and final disposal by the City General Services Office.

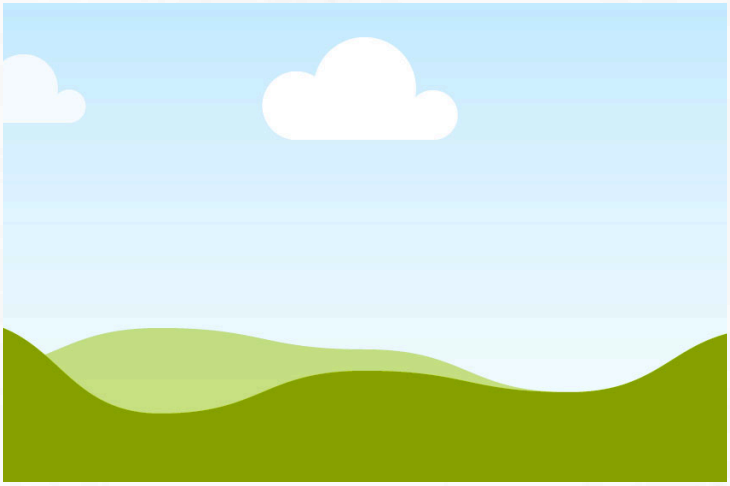

All School Deans and Heads of Offices are directed to widely disseminate this Memo among all the members of their respective communities, and to ensure their compliance.

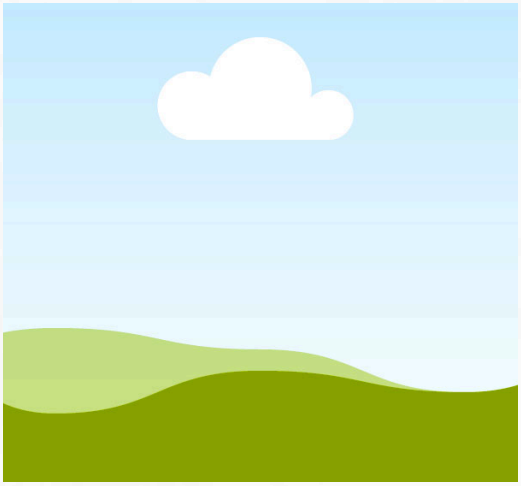

The Special Services Department and all outsourced janitorial service providers are directed to coordinate with the Center for Environmental Management and Sustainable Development (CEMSD) for the proper implementation of this Memo.
